

Iberdrola Australia commits to construction of 145MW Flyers Creek Wind Farm in NSW

Iberdrola Australia is pleased to announce that it has committed to building Flyers Creek Wind Farm, a 145MW wind project near Blayney in central-west New South Wales (NSW). The project is expected to generate approximately 450 gigawatt hours of electricity per year, equivalent to powering more than 80,000 Australian households and avoiding over 330,000 tonnes of carbon emissions per year.

Construction works are expected to begin in March 2022 and will include the installation of 38 wind turbines and related balance of plant. The project will create 230 jobs during construction, and an estimated 6-8 permanent regional jobs throughout its operational life. A Community Benefit Fund will also be established and will receive its first contribution with the start of construction. The Fund will be administered by Blayney Shire Council.

As Australia's ageing and unreliable coal fired power plants rapidly approach retirement, the National Electricity Market (NEM) will require significant investment in replacement generation. Since entering the Australian market in 2019, Iberdrola has invested in Port Augusta Renewable Energy Park in South Australia (SA), Avonlie Solar Farm in NSW, Wallgrove Grid Battery in NSW, and Flyers Creek Wind Farm in NSW. These projects will add approximately 760MW of renewable capacity to the NEM and represent a capital commitment in excess of A\$1bn. These projects will help the Australian economy to achieve its decarbonization goals while also providing customers across Australia with reliable supplies of low-cost green electricity.

Chief Executive Officer and Managing Director of Iberdrola Australia, Ross Rolfe, AO, said:

"We are delighted to be progressing with the construction of Flyers Creek Wind Farm. The project will make a meaningful contribution to economic
